

Enabling/Disabling Exchange Direct Push on the Server

By default, Direct Push is enabled in Exchange 2003 SP2. However you can enable/disable it in Exchange System Manager.

In Exchange System Manager expand **Global Settings**, right-click on **Mobile Services, Properties** and check/uncheck the box for "**Enable Direct Push over HTTP(S)**"

You can also change this setting on a per-user basis using Active Directory Users and Computers.

In Active Directory Users & Computers, click on the user, **Properties**, **Exchange Features** tab, under **Mobile Services** enable/disable **Up-to-Date Notifications**.
