

Installing the Microsoft Exchange ActiveSync Web Administration Tool

The Microsoft Exchange ActiveSync Web Administration Tool can be located in our Software Library and from the Microsoft website. Once you have downloaded it perform the following installation steps:

1. Extract the **MobileAdmin.exe** file, and then run the **MobileAdmin.msi** package on your Exchange 2003 SP2 front-end server. Run the **MobileAdmin.msi** package on your back-end server if you only have one Exchange Server in your organization.
2. In the **Microsoft Exchange ActiveSync Administration Tool Installation** wizard click **Next**.
3. To accept Microsoft Software License Terms, click **Accept**, and then click **Next**.
4. Let the installation complete, and then click **Finish** to exit the installation wizard.

After you install the Exchange Server ActiveSync Web Administration tool, you can access the mobile version of this administration tool from any remote computer by typing **<http://exchangeservername/mobileadmin>** in your internet browser. You must then authenticate your credentials to access this tool to get the Mobile Admin Web Form.

The Web Form provides the following functions:

Remote Wipe: You can use the remote wipe option to manage the users' devices either by initiating remote wipes or by cleaning up device partnerships for specific devices.

Transaction Log: You can view a log of administrative actions by using the Transaction Log option. The tool displays the device ID, the device type, and the time the device last synchronized each of the user's devices with the Microsoft Exchange Server.
