

Adam Phones Mobile App

Controlling mobile usage
and mitigating 'bill shock'
from your smartphone

The Adam Phones Mobile App empowers users to monitor and control expenditure via their smartphone, going further than ever before to increase awareness and mitigate 'bill shock'.

Users can instantly track their current unbilled expenditure and activity levels, breaking down usage by call type and mobile data. 'Bill shock' prevention is enhanced with Spend Alert, enabling all users to receive alerts for voice and data use, ensuring they (and budget holders) are promptly notified should usage exceed specified limits. Those authorised can be granted access to set their own alert thresholds.

To ensure complete visibility and understanding of their tariff, users can view their current voice and data inclusions along with full

descriptions. And to enhance the feature, nominated users can add applicable bolt-ons, enabling the organisation to benefit from any savings opportunities while streamlining internal process.

Invoices, including a full summary of charges and graphical overviews of subscriptions and usage, are viewable on screen.

The app is designed to deliver end user accountability; however, budget holders can utilise an 'administrator mode', enabling them to view expenditure and activity, and set alerts, for users under their control. The Adam Phones Mobile App is available for iOS and Android and is compatible with all the leading mobile networks.

Key Benefits

Empower users to monitor and control their expenditure

Reduced incidence of 'bill shock'

Optimise tariffs to reflect variable usage profiles

Administrator mode for budget holders

Compatible with iOS and Android

Flexible and easy to deploy

Key Features

Track live expenditure and activity metrics

Set and adjust expenditure alerts

View tariff details and add bolt-ons

Access invoices

Enable / disable app features for any users
