

# LoopUp Remote Meetings

Conferencing solutions  
for meetings that matter

Communication has always been at the heart of successful organisations. But recent shifts in working patterns have meant that the spotlight has now intensified on secure, reliable best-in-class tools that drive business continuity and collaboration. We understand these are highly visible, business-critical choices. For virtual meetings with clients or other important external guests, you need technology that won't let you down – there's simply no room for a bad experience.

LoopUp Voice and Video Conferencing combines the features of sometimes costly collaboration software and traditional audio-conferencing services. We're able to offer this best-in-class, business grade solution with zero upfront or recurring cost, with just a competitive pence-per-minute rate charge for audio/video services.

The solution requires no training and offers unmatched simplicity for both users and conference guests.

LoopUp video conferences are simple for guests to join and audio has guaranteed reliability, helping you transform your remote meetings, promote client engagement and drive better business outcomes. It's available as a native app for Microsoft Teams, or as a standalone solution, with no downloads required for participants whether accessing from a smartphone (iOS or Android) or a PC.

The LoopUp account owner sends out invites (via Outlook if required), and attendees select any number for the audio to be dialled to them, via Tier 1 managed networks only. This is then charged at an agreed pence-per-minute cost to the account owner and the system is compatible with any number globally, including satellite phones.
